

# MARBLE SKIN+

## ANTIMICROBIAL FILM

2020 INFORMATION SHEET

### SILVER ION TECHNOLOGY

Marble Skin+® is a medical grade antimicrobial film designed to protect and sanitize smooth surfaces from the spread of bacteria, viruses and surface damage. The technology provided by Marble Skin+ kills up to 99.99% of common microbes such as Influenza, Staphylococcus and E. Coli on the film surface. Available in a gloss or satin finish, Marble Skin® protects surfaces such as, counter tops and vanities from everyday use that results in etching, scuffing and staining. Marble Skin+® has an additional fungistatic agent to protect the film from fungal growth and contains silver ions. The silver ions inhibit the growth of microbes on the film's surface. Once applied, the surface will remain protected for at least two years before reapplication and can withstand temperatures between -40F to 212F. Marble Skin+® is the ultimate level of protection.

### SURFACES

- MARBLE
- GRANITE
- QUARTZITE
- QUARTZ
- GLASS
- BRASS
- LIMESTONE
- TRAVERTINE
- CONCRETE
- ONYX
- STAINLESS STEEL
- POWDER COATED STEEL

### TYPICAL APPLICATIONS

- COUNTER TOPS
- VANITIES
- BARS
- TABLE TOPS
- PUSH/PULL PLATES
- REGISTRATION COUNTERS
- DESKS
- COFFEE TABLES
- FOOD SERVICE STATIONS
- KITCHEN EQUIPMENT
